

2015 INITIATIVES

Household appliances to lower carbon footprint bigfoot-appliances.com

We would like to talk to engineers with plumbing and/or digital micro-controller expertise to assemble, evaluate and entrepreneurially collaborate on a vapor-compression refrigerator-freezer prototype for battery-driven, renewable-energy applications. In this realization, expansion-valves, evaporators, and holding plates serve multiple compartments or drawers with cryogel or vacuum insulated panel insulation. A micro-controller switches cold zones from freezer to fridge by changing flow rate of refrigerant at the valve.

Anticipating the “energy internet” touch-buttons.com

We seek entrepreneurial collaboration with programmer-architects skilled in open source, container virtualization, and mashups— to discuss a cloud platform positioned today to serve a future “energy internet”.

Real property initiatives to mitigate anthropogenic global warming

salter-island.org

We are interested to discuss the possibility of a single-day “turn-key” event or retreat on a privately owned Midcoast Maine wilderness island to be hosted by a clean energy/environment institution. Fresh lobster, organic flowers, and catered organic food provided by owner. Subscriptions limited to 15-20 guests.

walk-to-the-movies.com

We invite risk-oriented investors, lessees, architects and planners to collaborate on a live-work-shop-play development concept targeting millennial entrepreneurs and boomer-investors. This is a unique opportunity to create sustainable LEEDS-ND futures.
